

1. User Stories

1.1 Client & Lead Management

The following stories cover the full lifecycle of a client from initial contact to long-term nurturing. They reflect the agent's need to capture, track, and stay in touch with leads without relying on memory or informal tools.

- As an agent, I want to add a new client profile with their full name, contact number, budget, preferred location, property type, and lead source, so that all client information is stored in one place from the moment of first contact.
- As an agent, I want to tag each client with a lifecycle status (New Lead, Active, Long-term / Nurturing, Under Offer, Closed, Inactive), so that I can filter and prioritise my pipeline at a glance.
- As an agent, I want to see all my active clients on a dashboard with their last interaction date and next follow-up date, so that I know immediately who needs attention today.
- As an agent, I want to receive an automatic reminder when I have not contacted a client within a configurable number of days (e.g. 7, 14, or 30), so that no lead falls through the cracks when I get busy.
- As an agent, I want to log every interaction with a client : call, WhatsApp message, or in-person meeting ,with a date, type, and short note, so that I have a complete history of all communication.
- As an agent, I want to mark a client as long-term and set a periodic check-in reminder (e.g. every 90 days), so that I stay visible to buyers who are not yet ready without over-contacting them.
- As an agent, I want to search and filter my client list by name, status, budget, preferred location, and property type, so that I can find the right client instantly without scrolling through a long list.

1.2 Property Listing Management

These stories address the agent's need to manage all property listings centrally, replacing the current practice of manually updating multiple external websites. They cover creating, updating, archiving, and monitoring listings.

- As an agent, I want to create a property listing with all required fields : type, price, location, size, status, owner contact, and notes , so that every listing is complete and consistent from the start.
- As an agent, I want to update a property's status at any time (Available, Under Offer, Sold, Withdrawn) in one tap, so that my records always reflect the current situation without me having to update multiple platforms.
- As an agent, I want to receive an alert when a property has been listed for longer than a configurable period (e.g. 30, 60, or 90 days) without a status change, so that I can take action on stale listings before they damage my reputation with the owner.
- As an agent, I want to view the full price change history for a property, so that I can track negotiation progress and justify pricing decisions to the owner.

- As an agent, I want to archive a sold or withdrawn property while keeping all its historical data, so that I can declutter my active listings without losing records I may need to reference later.
- As an agent, I want to attach photos, documents, and marketing assets to a property listing, so that everything related to that property is stored in one place and accessible on my phone during a viewing.

1.3 Client - Property Matching

These stories reflect the agent's need to quickly identify suitable properties for a client without manually scanning every listing. They also cover the tracking of which properties have already been shown.

- As an agent, I want to run a match query for a client using their saved budget, location, and property type preferences, so that I can identify relevant listings instantly without having to search manually.
- As an agent, I want to mark a property as 'Suggested' or 'Shown' on a client's profile, so that I always know what each client has already seen and never repeat a suggestion.
- As an agent, I want to see which properties were shown to which clients and on what date, so that I have a clear record of all property–client interactions in one place.

1.4 Appointments & Viewings

These stories cover the scheduling, reminding, and follow-up flow around property viewings, which represent the majority of the agent's working week. The focus is on reducing manual effort and ensuring that outcomes are always captured.

- As an agent, I want to schedule a viewing by linking a client, a property, a date/time, and a location, so that all my appointments are organised and visible in one place.
- As an agent, I want to receive automated push reminders 24 hours and 2 hours before each viewing, so that I am never caught unprepared or late for an appointment.
- As an agent, I want to log post-viewing feedback, client reaction, notes, and a follow-up action, immediately after a viewing, so that I capture the outcome while the conversation is still fresh.
- As an agent, I want to cancel or reschedule a viewing and have the change logged automatically, so that I always have an accurate history of what happened and when.
- As an agent, I want to see a daily and weekly agenda of all my scheduled appointments, so that I can plan my day without checking multiple tools.
- As an agent, I want my viewings to sync automatically with Google Calendar, so that I have one unified schedule across all the tools I use.

1.5 Deal Pipeline Management

These stories cover the full deal lifecycle from the moment a client expresses interest through to closing or collapse. They reflect the multi-party, multi-document nature of real estate transactions in Albania.

- As an agent, I want to create a deal record linking a client, a property, and the owner, so that all parties and all information related to a transaction are in one place.

- As an agent, I want to move a deal through predefined stages : Offer Initiated, Negotiation in Progress, Verbal Agreement, Security Deposit Paid, Legal Review, Final Sale Signed, Closed , so that I always know where each negotiation stands.
- As an agent, I want to log notes and events at each stage of a deal, so that there is a complete audit trail of every decision and communication.
- As an agent, I want to attach deal-related documents (listing contract, showing contract, preliminary agreement, deposit contract, final sale contract) at each relevant stage, so that all paperwork is linked to the transaction and accessible at any time.
- As an agent, I want to flag a deal as at-risk and add a reason, so that I can take corrective action before the deal collapses entirely.
- As an agent, I want to be notified when a deal stage has not been updated in a configurable number of days, so that no deal goes stale without my awareness.
- As an agent, I want to mark a deal as Closed or Lost, so that my pipeline is always accurate and the associated property and commission records are updated accordingly.

1.6 Commission & Financial Tracking

These stories address the agent's need for financial clarity across all active and closed deals. Commission structures vary per transaction and the agent currently has no structured way to track what she has earned, what she is owed, or what she has spent.

- As an agent, I want to set the commission rate for each deal (1% for property only, 1% via colleague, 2% full broker, or a custom rate), so that my expected earnings are calculated accurately for every transaction.
- As an agent, I want the system to calculate my expected commission automatically when a deal is created, so that I never have to do the calculation manually.
- As an agent, I want to track the payment status of each commission (Pending, Partially Paid, Paid), so that I always know what I have received and what I am still owed.
- As an agent, I want to log expenses against each deal : photography, fuel, marketing, broker fees , so that I can calculate my true net earnings per transaction.
- As an agent, I want to see a financial summary showing total expected commissions, total received, total expenses, and net earnings for any selected time period, so that I have a clear picture of my finances at any time.
- As an agent, I want to see a flag when a tax obligation may apply to my earnings for a given period, so that I am not caught off guard by tax liabilities.

1.7 Performance & Reporting

These stories reflect the agent's need for visibility into her own performance, which she currently measures informally or not at all. They cover dashboards, targets, and exportable reports.

- As an agent, I want to see a performance dashboard showing my active clients, active listings, viewings this week, deals closed this month, and total commissions earned, so that I can gauge where I stand at any moment.
- As an agent, I want to set a personal monthly sales target (number of deals or commission amount) and track my progress toward it, so that I stay motivated and focused on what matters.

- As an agent, I want to generate an exportable report summarising my deal history, client pipeline, and financial performance, so that I can review my activity over time or share it when needed.
- As an agent, I want to see how long each property has been listed and how many viewings it has generated, so that I can identify underperforming listings and take action.

1.8 Notifications & Reminders

These stories ensure that the agent receives the right alerts at the right time, reducing the cognitive load of tracking multiple clients, properties, and deals simultaneously.

- As an agent, I want to receive push notifications for upcoming viewings, overdue follow-ups, stalled deals, and properties that have been listed too long, so that nothing important slips past me when I am busy in the field.
- As an agent, I want to configure my notification preferences , type, frequency, and timing, so that I receive alerts in a way that fits my working style.
- As an agent, I want to see a full history of all past notifications in an in-app notification centre, so that I can review what alerts were sent and when.

1.9 Communication Integration

These stories cover the integration between REMS and the communication channels the agent uses every day, primarily WhatsApp and calendar apps, so that switching between tools is minimised.

- As an agent, I want to initiate a WhatsApp message or phone call directly from a client's profile, so that I can act on a reminder immediately without switching apps.
- As an agent, I want the system to log when I last contacted a client via any channel, so that I always know how long it has been since we last spoke.
- As an agent, I want my appointments to sync with Google Calendar or Outlook automatically, so that I have one unified view of my schedule across all devices.

1.10 Long-term Client Follow-up

These stories specifically address the nurturing of clients who are not yet ready to buy but should not be forgotten. They reflect the reality that many leads require months of patience before they convert.

- As an agent, I want to receive a reminder when a long-term client has been dormant for a configurable period, so that I re-engage them before they forget about me or find another agent.
- As an agent, I want the system to surface matching properties for dormant clients automatically when a new listing is added, so that I have a concrete reason to reach out rather than just a generic check-in.
- As an agent, I want to receive a suggested draft message for a long-term client follow-up, so that I can send a professional, personalised message quickly without composing it from scratch.
- As an agent, I want all follow-up communication to be logged automatically when I send a message from REMS, so that the client's interaction history is always up to date.

- As an agent, I want to set the next follow-up reminder immediately after logging an interaction, so that the nurturing cycle continues without any gap.

1.11 Deal Recovery

These stories cover the scenario where a deal collapses after significant progress has been made. They ensure that the property is returned to the market, the client is re-engaged, and the agent's pipeline recovers as quickly as possible.

- As an agent, I want to mark a failed deal as Lost and have the associated property automatically set back to Available, so that the listing returns to the active pool immediately without a manual step.
- As an agent, I want the system to suggest follow-up actions after a deal collapses : such as re-engage the client, explore a lower budget, or suggest re-financing ,so that I can plan a recovery without having to think from scratch.
- As an agent, I want to log a recovery interaction with the affected client, so that the client's file reflects all communication including the collapse and the recovery attempt.
- As an agent, I want the system to run a new match query against the re-available property and surface potential alternative clients, so that I can immediately identify who else might be interested.
- As an agent, I want to schedule a next follow-up reminder for the affected client after a deal collapse, so that the relationship is not abandoned even if the immediate transaction failed.
